

FRUITS AND VEGETABLES

COMPANY

Natural Citrus has been operating in the Brazilian fruit market for over 20 years, with an emphasis on Tahitian Acid Lime. Today, our orchards have approximately 22,000 plants in production on 60 hectares and we will reach a production of 1,300 tons this year. We're projecting 1,600 tons by 2025 and we've already started the expansion phase with the aim of reaching 150 hectares planted by the end of 2025.

Our plants are irrigated with micro-sprinklers, using tube wells powered by solar energy that meets 80% of their demands, the other 20% being supplied by nighttime irrigation energy. We have 15 employees who are trained and qualified to understand the needs of our orchards and fully meet their demands with all the best environmental and health practices.
