

HONEY AND BEE DERIVATIVES

COMPANY

The company came about through Maria's Apiary and Meliponary, directly from the town of Itiúba-BA, where we raise Apis bees (with stingers) and ASF bees (native Brazilian stingless bees).

We currently market our production here in the city of Salvador - Bahia and through this company, we are also trying to change the lives of many producers who dream of one day making a living from this activity and giving even more value to the organic honey of the Bahian hinterland.

PRODUCTS

NCM 0409.00.00

Honey is a food, usually found in a viscous, sugary liquid state, which is produced by bees from the nectar collected from flowers and processed by their digestive enzymes, and stored in honeycombs in their hives to serve as food.

Wild honey, with flowers predominantly from the Brazilian caatinga. With various shades of colors and flavors.

DETAILS ON PRODUCTION CAPACITY, SEASONALITY AND OTHER CHARACTERISTICS:

15 tons per year.
Added to the partner producers.
