

HONEY AND BEE DERIVATIVES

COMPANY

In 2002, the Association of Beekeepers of the Vale do Jequitinhonha – AAPIVAJE was created, which today has approximately 180 beekeepers from 16 municipalities in the region. In 2010 a honey warehouse was built in Turmalina, aiming to benefit the product in the own region of production. Thus, the need arose to create a structure with legal competence to organize, benefit and market the honey of the region, in this way the Cooperative of Beekeepers of the Vale do Jequitinhonha – COOAPIVAJE is created.

We guarantee the quality control in the stages of product processing. Since 2017 we are marketing with the brand Mel Jequitinhonha.

PRODUCTS

The bees of the species Apis Mellifera are not native to Brazil, they were introduced at the time of Brazil colony by the Jesuit priests in order to produce candles from wax, but they spread throughout the country. Until approximately the end of the 1960s only existed in Brazil bee breeds of the Apis gender originating from the European continent, it was when by accident also happened to the introduction of a breed originating from the African continent that naturally crossed with the species of European origin already existing, giving rise to the breed currently called Africanized.
