BioCaatinga Meliponary: A Legacy of Sustainability and Innovation in the Semi-Arid. The BioCaatinga Meliponary was born out of a passion for the rich biodiversity of the northeastern semi-arid region and a belief in the potential of meliponiculture as a tool for sustainable development. Founded in 2022, the meliponary breeds and manages native stingless bees, with a focus on natural products from family farming.

Our main purpose is to combine environmental conservation with income generation, promoting management practices that respect the local ecosystem. We believe that meliponiculture is an innovative and economically viable activity, capable of strengthening family farming and adding value to the biodiversity of the Caatinga, bringing health and flavor to people's lives.

DETAILS ON PRODUCTION CAPACITY, SEASONALITY AND OTHER CHARACTERISTICS:

Current production capacity is 2,000 liters per year, the result of two annual harvests of approximately 1,000 liters each, which allows us to fully respect the ripening time needed to guarantee the ideal quality of the honey at the time of bottling.

Oxente Honey - The Authentic Taste of the Northeastern Uruçu Bee

Oxente Honey, produced by the BioCaatinga Meliponary, was born with the aim of capturing the purest essence of nature and valuing the richness of Brazilian biomes. Made from the Uruçu Nordestina bee, a native species recognized for its distinctive honey, the product has a unique sensory profile, with slightly acidic nuances, citrus touches and woody notes that faithfully reflect the region's characteristic flora.

Collected from rational hives and managed in a totally sustainable way, Oxente Honey preserves its origin and ensures a production process that respects the environment and contributes to the continuity of the species. Its composition maintains important natural properties, such as antioxidants and bioactive compounds, resulting in a nutritious, authentic and high-quality food.

More than just a honey, Mel Oxente represents a direct link to Brazilian biodiversity and the culture of the northeast. Each pot carries the appreciation of native pollinators, the strengthening of family farming and support for communities that work in a responsible and environmentally conscious way. By choosing Oxente Honey, consumers not only enjoy a unique taste, but also contribute to a positive cultural, social and environmental impact.
