

**FISH AND
SEAFOOD**

COMPANY

Saciatta is a Brazilian fish industry, born in Mato Grosso from the experience of Natter, an agricultural holding company, in fish farming. With operations that began in 2007, the company evolved from fish farming to a vertically integrated structure, controlling all stages of the production chain: feed manufacturing, fry production, genetic development, grow-out, slaughter, processing, marketing, and even waste utilization for fertilizer production for crops, which reinforces its commitment to sustainability and circular economy.

In 2024, it expanded its processing plant in Campo Verde (MT), tripling its production capacity. With a primary focus on tilapia, Saciatta combines origin, quality, food safety, and responsible production, preparing to expand its presence in national and international markets.

PRODUCTS

NCM 0302.39.00

Tilapia is produced in Brazil through a vertically integrated production chain, which allows control of all stages, from genetic development and fry production to nutrition, grow-out, processing, and marketing. This model ensures greater traceability, standardization, and origin control, resulting in a product of consistent quality.

The fillets are processed with industrial technology and strict temperature control, being individually frozen to remain separate within the packaging. This feature facilitates portioning, reduces waste, and helps preserve the texture, freshness, and natural characteristics of the fish.

Produced in Mato Grosso, Saciatta tilapia combines industrial scale, supply regularity, and process control, efficiently serving different markets and distribution channels, always with a focus on quality and food safety.

NCM: 0304.31.00 - Fresh tilapia fillet

NCM: 0304.61.00 - Frozen tilapia fillet

NCM: 0303.23.00 - Frozen tilapia portion

DETAILS ON PRODUCTION CAPACITY, SEASONALITY AND OTHER CHARACTERISTICS:

The industrial unit in Campo Verde (MT) has a production capacity of 639 tons per month, ensuring operational scale, standardization, and continuous service to national and international markets.
