

## FRUIT AND VEGETABLES

## COMPANY

Terra Criar is a company formed by a group of natural doctors from the Vale do São Francisco region, who have combined their knowledge and experience to integrate their vocation in health with their expertise in nutrition and the management of tropical fruits. Our work ranges from cultivation to agro-industrial processing, guaranteeing quality products for both the domestic and foreign markets.

We began our journey growing yellow melons, and over time we expanded our production to include mangoes and green coconuts, always maintaining our commitment to excellence, sustainability and the well-being of our consumers.

## PRODUCTS

We grow our fruit in a privileged region that combines the best geographical setting in the world, with ideal climate, soil and water resources for producing high-quality fruit. Thanks to these conditions, we are able to maintain high productivity throughout every month of the year. Our yellow melons are the result of a hybrid developed by a transnational company, the fruit of advanced technological studies; at every stage of the process, we strictly follow international protocols. The Pálmer mango follows exactly the same standard of excellence, and these two varieties are the main highlights of our portfolio.

In the green coconut segment, it is the pioneer in the Vale do São Francisco region, having personally developed and implemented my own aseptic operation for export, guaranteeing quality, safety and innovation in all processes.
