

# FRUITS AND VEGETABLES

## COMPANY

The cooperative has been around for a relatively short period of time. The group of farmers began through the São Paulo Persimmon Producers Association, established to share technical information and research new varieties. Over the years, a need was seen to establish an organization to help market its products, leading to the creation of the APPC Agroindustrial Cooperative.

The APPC works with high-quality products that are selected and produced to ensure the best flavors in accordance with international standards.

## PRODUCTS

**NCM 08.0610.00**

Our products include fruits such as pilar moscato grapes, dekopon, persimmons, atemoyas, plums and many others.

One of our most prominent products is our grape, considered the first gourmet grape in Brazil. It features a rather high degree of sweetness with a crunchy berry and can be eaten unpeeled.
