

AÇAÍ FROM BRAZIL

COMPANY

Our story began in 2016 with the start of açai cultivation in Paracuru, combining entrepreneurial vision, innovation, and a passion for the potential of Brazilian açai. Over the years, we have transformed planting into a structured and continuous production, bringing to market high-quality pulp and freeze-dried açai powder, developed to meet the demands of the national and international markets.

Today, we continue to invest in technology, developing new products and solutions that enhance the authenticity, flavor, and benefits of açai, always focusing on quality, sustainability, and expansion into new markets.

PRODUCTS

NCM 1106.30.00

Our freeze-dried açai powder is produced from selected high-quality pulp, using freeze-drying technology that superiorly preserves the sensory and nutritional characteristics of the fruit. The process preserves flavor, aroma, color, and bioactive compounds, resulting in a premium, natural, and clean-label ingredient, with no added preservatives or artificial ingredients. With its high concentration, ease of use, and long shelf life, this product is ideal for applications in the food and beverage, nutritional supplement, functional food, nutraceutical, and cosmetic industries.

Among its main advantages are high stability, quality standardization between batches, and versatility of application in different industrial formulations. Because it does not require refrigeration and has a shelf life of up to 24 months, it provides significant logistical gains, reducing storage and transportation costs. Developed to meet the most demanding standards of national and international markets, our freeze-dried açai powder combines technological innovation, operational efficiency, and the authenticity of the Amazonian fruit in a single, high-value-added ingredient.

DETAILS ON PRODUCTION CAPACITY, SEASONALITY AND OTHER CHARACTERISTICS:

Planned production capacity to meet market demands with operational efficiency, high quality standards, and sustainable expansion potential.
