

FISH

COMPANY

The company exists since 1999, in other activities. We have been operating in the field of shrimp farming since 2015, selling freshwater shrimp to several states including Ceará and Bahia. At the moment we are in negotiation for export.

Apodi Camarão emerged through an experiment conducted with the freshwater shrimp inspired by similar successful activities in other states. Through this idea, the businessman Hélio Marinho Filho set up the pioneering venture in the Apodi region. From there, the company's history consolidated in the market.

PRODUCTS

NCM 0306.95.00

Apodi shrimp is grown in fresh and mineral water nursery, transported to the breeding ground through tubular wells. In addition, their nutrition is based through industrialized feed and natural feed produced at the breeding site. The standard of the company guarantees the product the following characteristics:

- Higher product quality;
- Larger weight;
- Faster growth;
- Shell with better quality;
- Easier handling of thin or thicker shell shrimp.

DETAILS ON PRODUCTION CAPACITY, SEASONALITY AND OTHER CHARACTERISTICS:

Production capacity of 60 tons annually with quarterly harvest period.

APODI CAMARÕES
