

## COMPANY

We began our activities in 1994, and over this period we have undergone several transformations, seeking to improve processes and technologies.

We have expanded our milling capacity to 250 tons of cassava daily, which has allowed us to diversify our product line and meet an ever-increasing demand for cassava derivatives.

With this, we have strengthened our position as one of the main starch factories in the state of Mato Grosso do Sul.

## PRODUCTS

Also known as paste, amide or sweet flour, cassava starch is a fine, white, odorless and tasteless powder that has more than 800 uses. Cassava starch is most widely used in industry, especially in the textile, paper, glue, paint, meat sausage, beer and food industries. Cassava flour is one of the main products of the cassava plant and is rich in starch, as well as containing fiber and ash (minerals).
