

**FRUITS AND
VEGETABLES**

COMPANY

The company is new. We started 05 years ago planting small areas of melon and watermelon to supply the foreign and domestic market. We currently serve customers in the UK, the Netherlands, and Spain.

Located 38 km from Mossoró, in the municipality of Upanema, Agrícola Campo Verde was born with a project to grow papaya. Currently, with social and environmental responsibility, it has been expanding its cultivation areas with corn, sweet corn, melon, and watermelon with and without seeds. With a technical staff made up of Agricultural Engineers, Agricultural Technicians, and Administrators, it has sought to perform a work focused on the quality of its products, whether in flavor, brix, and external appearance.

PRODUCTS

Our production starts in mid-August and lasts until mid-February. The best time to start negotiations is April and May.

We produce watermelon varieties suitable for the processing industry as well as for retail. Some varieties, such as Scarlet and Durlinda, can reach a shelf life of up to 30 days when properly stored. The main melon variety produced is the YHD Goldex type. This variety has a good shelf life, 20 days, and excellent brix and flavor.

In terms of packaging, we are very flexible in order to meet the needs of the end customer with a competitive and good quality product.
