ACEROLA

Acerola is a fruit that can be used as a medicinal plant due to the high concentration of vitamin C. The fruits of acerola, besides being tasty, are very nutritious, because they are also very rich in vitamin A, B vitamins complex, iron and calcium.

Its scientific name is Malpighia Glabra Linné. Acerola is a fruit with few calories and so it can be included in a diet to lose weight. Furthermore, it is rich in vitamin C which helps to strengthen

CASHEW

Cashew is often thought of as the fruit of the cashew tree (*Anacardium occidentale*) when, in fact, it is as accessory fruit.

Cashew, accessory fruit, is juicy and rich in vitamin C and iron. After the processing of the cashew, juices, honey and sweets are prepared, such as cajuada, cashew raisins, cashew rapadura. As its juice ferments quickly, it can be distilled to produce a cauim spirit. Non-alcoholic beverages are also made from it, such as cajuína. Long before the discovery of Brazil and before the arrival of the Portuguese, cashew was already the staple food of the native populations. For example: the Tremembé people already fermented the cashew juice, the mocororó, which was and still is drunk at the Torém ceremony.

ACEROLA JUICE, UNRIPE AND RIPE, ORGANIC AND CONVENTIONAL, INTEGRAL, CLARIFIED AND CONCENTRATED
