

FISH

COMPANY

Tilabras was created in 2015, elaborated the project of use concession in waters of Federal domain, signed the contract with the Government in mid-2017 and since then has been implementing its project of fish farming in net ponds in the reservoir of the UHE of Jupia, in the Paraná River. It has a production capacity granted to 100,000 tons/year.

The location choice of Tilabras is based on the careful work carried out by Gérard Moss, who collected water samples at 1,170 points with a seaplane, in several water reservoirs distributed throughout Brazil. Supported by reputed experts in fish farming, Tilabras found in the municipality of Selvíria, Mato Grosso do Sul, the perfect place to produce tilapias in net ponds.

PRODUCTS

Our products have a production quality control, complying with the preservation and maintenance of water quality, the environment, in the aquatic and terrestrial flora and fauna.

Tilapia is one of the best sources of healthy protein. In addition, it has almost as much omega-3 as other popular fish such as cod and albacore tuna, and more fatty acids than chicken or other meats.

It is also rich in vitamin B12 and provides high-quality protein without carbohydrates. Therefore, tilapia is a healthy choice for consumers and is a fundamental part of a balanced diet.
