## COMPANY

Our company was born with the purpose of enhancing the coffee production started by our parents, adding quality and serving an increasingly demanding and specialized market. My grandparents and parents were pioneers in coffee cultivation in our region, becoming references in the activity and building a history of dedication and family tradition.

One of the most significant moments in this journey was when my father, with no resources to start the first planting, sold his horse to invest in the dream of producing coffee. This decision became the family's main source of income. Inspired by this story, our brand features the image of a horse running towards the future, but always looking back at its origins, symbolizing courage, tradition, and respect for our roots.

## PRODUCTS

Our product line consists of 100% Arabica coffees, grown in the privileged altitudes of the Capixaba Mountains, a region recognized for its favorable climatic and geographical conditions for producing quality coffees. We work with different categories to meet the demands of the national and international market, offering Specialty Raw Green Bean Arabica Coffee (83 to 85 points), Specialty Roasted and Ground Arabica Coffee (83 to 85 points), and Traditional Raw Green Bean Arabica Coffee (commodity). Each product is developed with attention to quality, selection of raw materials, and appreciation of its origin's characteristics.

Production in the Capixaba Mountains yields coffees with their own identity, a result of the combination of altitude, climate, soil, and natural conditions of the region. These factors contribute to the development of beans with distinct aromatic and sensory profiles, providing beverages with pleasant flavor, balance, and personality. Our commitment is to offer coffees that express the richness of Capixaba coffee farming, combining productive tradition, quality, and care in every step, from cultivation to the preparation of the final product, serving both consumers seeking specialty coffees and companies that need a supply of raw green coffee beans for various commercial applications.

## DETAILS ON PRODUCTION CAPACITY, SEASONALITY AND OTHER CHARACTERISTICS:

*The annual production capacity includes approximately 300 bags of specialty raw green coffee beans, in addition to an estimated volume of 800 to 900 bags of traditional Arabica coffee (commodity), meeting different demands and opportunities in the coffee market.*
