

COMPANY

Amazomel is a company located in the heart of the Amazon rainforest, committed to the conservation of indigenous stingless bees, promoting their cultivation (Meliponiculture) in riverside communities in a sustainable way, generating income and a nutritional source for these families and eliminating the predatory exploitation of honey in the forest.

In addition, by breeding these bees, native families are also practicing organic farming, without using pesticides, burning or cutting down the forest. Native stingless bees are responsible for up to 90% of the pollination of native forest species in the Amazon, which is why their honeys are the strongest in nutritional and therapeutic content in the world, due to the diversity of flowers in the Amazon rainforest.

PRODUCTS

NCM 0409.00.00

Our company has the Federal Inspection Service (SIF) certification from the Brazilian Ministry of Agriculture, so we can export the honey native to the Amazon rainforest anywhere in the world.

Our products come from the breeding of native stingless bees, Meliponiculture and Apiculture exclusively in the Amazon rainforest. In natura honeys with proven therapeutic properties, multifloral, produced in various locations from the source to the mouth of the Amazon River, keeping all the "Terroir" of the different niches that make up the immense Amazon Biome.

We can offer honeys from different flowers, all originating in the Amazon Biome, from plant species with medicinal properties, as well as from different species of stingless bees, each with its own peculiarities in terms of aroma, color, texture and acidity. These are honeys from more than 60 species of native stingless bees that only exist in the Amazon rainforest.
