

**HONEY AND
BEE DERIVATIVES**

COMPANY

Mel Barrufi began its activities in 1998 and has a vast expertise in the field of beekeeping. And so they apply new technologies to their day-to-day work in the field to ensure the quality of their products.

With the utmost care when harvesting BARRUFI HONEY, our beekeepers preserve the ripeness of the combs, thus preserving their nutrients and ensuring the ideal moisture content. Every batch received at the MEL BARRUFI warehouse undergoes rigorous laboratory tests. Polymer, humidity, ethyl grade, porcine DNA, lead, ash, etc. In the process of bottling BARRUFI HONEY, every stage is carried out with the utmost care, guaranteeing compliance with all the stages of the HALAL National/International Standard Self-Control Program.

PRODUCTS

NCM 0409.00.00

The variety of flowers, called the "bloom," has a significant impact on the honey. Bees collect raw materials from flowers to create honey, where each type of flower contributes to the creation of a honey that is unique in taste, aroma and even therapeutic properties. There are "unifloral" honeys, which are produced predominantly from a single species of flower, and "multifloral" honeys, which result from the combination of several flowers.

Wild

Wild honey, one of the most popular and consumed in the world. It comes from extracting nectar from a huge variety of native flowers. It is a natural antioxidant.

Eucalyptus

A dark honey with a refreshing and more intense flavor due to its concentration of iron, calcium and magnesium. Its properties include its expectorant action, which helps fight coughs and colds.

Quitoco

Quitoco is a medicinal plant native to South America and can easily be found in the southern regions of Brazil. It has a light color and a mild taste. It is rich in proteins, vitamins and minerals, and has a bactericidal and antiseptic action, which is certainly a different experience from other honeys.

DETAILS ON PRODUCTION CAPACITY, SEASONALITY AND OTHER CHARACTERISTICS:

**PRODUCTION CAPACITY: 15000KG
PER MONTH**

DIVERSITY OF PREDOMINANT BLOOMS
HIGH QUALITY FOOD SAFETY
