PECANS

## COMPANY

We grow Pecans on 120 irrigated hectares, managed by Eng. Agronomist Émerson de Franceschi and Chilean consultant Matias Bóris. The harvest is annual and runs from mid-April to the end of June.

We now operate 90 productive hectares where we have adopted the Israeli irrigation technology, using the micro-drip process with buried hoses that hydrate and fertilize the hickory trees according to nutritional needs. Nutritional demand is determined through a soil and leaf analysis performed every three months, with samples collected of the planted areas.

## PRODUCTS

NCM 0802.3200

Fruits 100% obtained from our own orchards, employing irrigation and strict control over pests and parasites. We use pesticides and organic nutrients and processing at our facilities, allowing us to deliver products to consumers that are superior quality, fresh, crunchy and tasty.

In-shell pecans and shelled pecans in 500g and 250g packs, and in bulk 8kg packages with:

**Whole nuts;  
Chopped nuts;  
Granulated nuts and  
Nut meal.**

## DETAILS ON PRODUCTION CAPACITY, SEASONALITY AND OTHER CHARACTERISTICS:

The harvest takes place between mid-April to mid-June, and we estimate a 50-ton crop of fresh, healthy, unshelled fruits for the 2020-2021 harvest. Based on the fact that the unshelled Pecan yield is approximately 50%, we will have 25 tons of Pecans to market in 2021.
