

## HONEY AND BEE DERIVATIVES

### COMPANY

**Mel Serra da Bodoquena** began as a family business. The father with his experience and the daughter with her drive, determination and youth joined forces to improve the product because they already had honey as a raw material.

The company's name extols the virtues of the Serra da Bodoquena, located within the Pantanal region in the state of Mato Grosso do Sul. The family's strip of land is located here, where it all started, producing honey with high levels of purity. Today, the apiary houses 700 hives that are able to yield 60 to 100 kilos of honey per hive.

### PRODUCTS

NCM 04.09.00.00

We believe that each type of honey is unique for either its flavor, aroma, or color, which is why we do not blend them. Our goal is to offer our customers the experience that each kind of honey can deliver just from tasting it, so we provide honey from diverse flowers. Serra da Bodoquena honey has succeeded in the market by providing products with unparalleled quality. We are always willing to do the best for our customers.

#### Honey Pollen Propolis Extract Royal Jelly

### DETAILS ON PRODUCTION CAPACITY, SEASONALITY AND OTHER CHARACTERISTICS:

Founding beekeeper Adriano Adames (an expert in genetic improvement, the conscious management of hives, high honey productivity and mass production of queens) believes that sharing and exhibiting his knowledge can contribute in some way to the environment. Just as we did when we participated and contributed to the project that defended giant armadillos without harming the bees, our main goal is to care for the environment. We can therefore increase our productivity and quality in the products offered to consumers.
