## PRODUCTS

**NCM 09.0300.90**

**Chá Mate** Innovating responsibly is good for health, and this is how the Inovamate products originated. They are a line of teas featuring *Ilex paraguariensis*, the scientific name for yerba mate – a tree native to the Atlantic Forest whose leaves possess a rich phytochemical composition and are harmoniously blended with fruits and spices. Pure or blended, our teas were created with the beneficial properties of Mate in mind, in addition to emphasizing the healthy aspects of the other ingredients that cater to everyone's tastes. Mate can be brewed as a tea for drinking by infusing it in hot water in a container using a press.

**Types of Management used:**  
Agroecological and Conventional

## DETAILS ON PRODUCTION CAPACITY, SEASONALITY AND OTHER CHARACTERISTICS:

Because it is a plant-based natural product, there may be fluctuations in productivity according to climatic conditions. Production is currently done year-round, meaning that variations in organoleptic properties may occur according to the harvest time.

Capacity of Agroecological Management  
Production: **20,000/kg of leaves/year.**

Capacity of Conventional Management  
Production: **120,000/kg of leaves/year.**

**Inovamate**  
City: Ilópolis  
State: Rio Grande do Sul  
Brasil
