

## COMPANY

Multipla Comex was implemented after participating in a government program to encourage exports and the desire to connect small producers to the world market of tropical fruits, taking advantage of the Brazilian vocation for fruit growing and the fact that we are large producers in the sector.

We operate in the export of fresh fruits. Currently, we ship fruit by air and sea to various countries in the world such as Arab countries, Spain, France, England, Canada, Netherlands, India in the 52 weeks of the year.

## PRODUCTS

Papaya is a complete fruit rich in vitamin C, with the advantage of being a fruit free of fats and calories.

Brazil produces in export scale the varieties Formosa and Golden, with high quality, in the Northeast and Southeast regions of the country. The mango is typical of Northeastern Brazil and the commercial export varieties are Tommy, Haden, Palmer, Rosa, Keitt and Kent.

Mango is rich in beta-carotene, powerful antioxidant and strong in combating free radicals of the human organism. The apple is produced in the south of Brazil, in the Gala and Fuji varieties, with high quality and world standard fruits. Tasty and rich in fiber and nutrients that help the body in the prevention of diseases.

### DETAILS ON PRODUCTION CAPACITY, SEASONALITY AND OTHER CHARACTERISTICS:

**Brazil produces the fruits on an export scale, which allows us to have fruits practically all year round.**

The Brazilian fruit is differentiated in the international market by its flavor, the result of the country's tropical climate, which allows production on a commercial scale with a focus on quality.
