BRAZILIAN COFFEE

BIZINOTTO
CAFÉS ESPECIAIS

COMPANY

We are a family of coffee growers from Sacramento, Minas Gerais, in the Cerrado Mineiro region. Since 1897, for five generations, we have cultivated Arabica coffee at 900 meters of altitude, preserving our Italian roots and family tradition.

In 2026, we founded BIZINOTTO, a specialty coffee brand that connects farm production to roasters, coffee shops, and buyers in Brazil and abroad, with single-origin coffees and traceability. Leading the project are Vinicius, his wife, Lorena, and his father, Cacildo, who oversee every step, from cultivation to bean selection, ensuring quality and authenticity in every batch.

NCM 0901.21.00

BIZINOTTO produces specialty single-origin Arabica coffees, grown on the family farm in Sacramento, Minas Gerais, in the Cerrado Mineiro region, at 900 meters altitude. With a coffee tradition dating back to 1897, the property combines knowledge passed down through generations and responsible agricultural practices. The plantation is 100% irrigated and adopts regenerative management techniques, including the cultivation of African mahogany and cover crops. We work with the Catuaí 62 Amarelo, Catuaí 144, Catuaí 99 Vermelho, Arara, and Catucaí 2SL varieties, using natural processing to preserve the characteristics of each batch.

The coffees from the 2025/2026 harvest have scores between 81 and 85 points, according to COB/SCA reports, with selection by sieve 16 or higher and controlled hand-picking. The sensory profile combines notes of chocolate, caramel, chestnuts, and nuts, as well as fruity nuances, medium citric acidity, and a smooth body. We sell green coffee in 60 kg bags, with lot traceability and sample availability for evaluation. Our average production is 2,000 bags per year, allowing us to offer special lots with consistent quality. We are also launching a line of roasted whole bean coffees under the BIZINOTTO brand, expanding our reach to roasters, coffee shops, and specialized buyers. Our differentiator lies in the combination of single origin, traceability, and direct relationship with the producer. All coffee comes from the family farm, allowing the buyer to know the origin and characteristics of each lot, with technical documentation for evaluation. Direct sales strengthen transparency and bring producers and buyers closer, while responsible management practices reinforce our commitment to sustainability. The property is also in the process of Rainforest Alliance certification, reaffirming our goal of developing increasingly responsible coffee farming prepared to meet national and international markets.

DETAILS ON PRODUCTION CAPACITY, SEASONALITY AND OTHER CHARACTERISTICS:

Average annual production of 2,000 bags of 60 kg, equivalent to 120 tons, on 50 hectares of 100% irrigated farmland, with availability for supply throughout the year.
