

## COMPANY

Brazil Plant was created in 2007, by the businessman Gilson Gondim, from Ceará. The company was conceived with the intention of taking advantage of the natural and geographical features of the territory where it is located for the production of ornamental plants.

Located in northeastern Brazil, but specifically in the state of Ceará, where the sun shines for 3,000 hours a year, Brazil Plant launches itself into the Plumeria market. Besides offering plants with great quality, the company also has logistical advantages, because it is located 15 minutes away from Fortaleza's international airport and 20 minutes away from Mucuripe Port, with 40,000m<sup>2</sup> of cultivated area, part of it in greenhouse.
