Cooperativa Apícola

HONEY AND BEE DERIVATIVES

COMPANY

Cooperams - Regional Cooperative of Beekeeping and Meliponiculture of Mato Grosso do Sul, was established in 2012. Currently it has 22 members. The main objective of Cooperams is to promote the development of beekeeping in the southern region of Mato Grosso do Sul through beekeeping and meliponiculture (rational breeding of native stingless honey bees).

Our cooperative has the capacity to process, filling, store and market honey produced by beekeepers residing in the settlements of Três Lagoas and in neighboring municipalities.

Honey is an ancient food, consumed by humans for more than 10 thousand years. Very widespread in several cultures, for many years it was the only source of sugar in food.

By breeding Stingless Bees (SB) it is possible to produce several types of honey and also contribute to the conservation of the different species. The activity helps in the biological balance of Brazilian biomes and in the preservation of plant species. Meliponiculture is also sustainable and highly adaptable to traditional communities.

100% Natural Honey

Tubes of 1080kg
Tubes of 500g
Tubes of 300g
Sachet packages 1kg
Pack of Sachet 50g

DETAILS ON PRODUCTION CAPACITY, SEASONALITY AND OTHER CHARACTERISTICS:

Honey production of
400kg per day.
