

**HONEY AND
BEE DERIVATIVES**

COMPANY

Mel Do Sol started its activities 40 years ago, being one of the pioneer companies in the development of beekeeping in the Brazilian Central-Western region. 30 years ago, it established its industry in the state of Goiás, and shortly after, obtained the sanitary certification (SIF registration) required to operate in the international market.

In recent years, we have started the process of promoting the main honey varieties produced in Brazil, first in the domestic market, and now in the international market.

PRODUCTS

NCM 0409.00.00

We use our extensive experience in Brazilian beekeeping to promote monoflowered products or characteristic of certain biomes, which exist in our tropical environment, specific to our diverse "terroirs". Products that highlight the almost infinite variety of honeys, existing in a country like ours, which has continental dimensions.

All our products are handmade, by dozens of beekeeper partner families, who find in Mel do Sol, a privileged channel of access to markets, contributing to its economic development, its establishment in the field.

Practically, all the Brazilian honey that is exported, makes it in bulk (285kg barrels), serving only to be blended with honeys from other sources, and finally, to be marketed in the form of a "blend", always as if it were a honey originated in the importing country. Our proposal is to value the almost infinite variety of Brazilian honeys, based on the enormous diversity of our biomes, exporting an already fractionated product, with predominant flowers indication and with greater added value.

DETAILS ON PRODUCTION CAPACITY, SEASONALITY AND OTHER CHARACTERISTICS:

Our productive capacity
it is up to 30000 kg/month.

*All flowerings have seasonal aspects, not being available
the 12 months of the year.*
