

**FRUITS AND  
VEGETABLES**

## COMPANY

For 13 years, Nortefrut has been a national reference in the production, processing and distribution of papaya in the domestic market. And it's not by chance. The founders, for 26 years, produce papaya and master the stages from planting to harvesting, ensuring high quality fruits and competitive price all year round.

All this experience is shared through partnerships with regional producers and the results have been excellent. They achieve a safer and more profitable marketing channel, using modern practices throughout the production chain.

## PRODUCTS

**NCM 0807.20.00**

Production is the most important stage for the taste of the fruit, thus Rio Corrente/Nortefrut pays special attention to it, ensuring a good management and correct harvest stage. Yet, we chose the west of Bahia to install our export-oriented unit because we consider that this region produces the best papaya in Brazil (fruit with consistent texture, brix and unique flavor).

Processing: in this stage, the papaya goes through rinsing, brushing, post-harvest treatment based on ozone.

Distribution: dynamism, efficiency and maintenance of the cold chain.

### Papaya and Formosa Papaya in different types of packaging.

### DETAILS ON PRODUCTION CAPACITY, SEASONALITY AND OTHER CHARACTERISTICS:

Production in three regions of Brazil, with processing capacity of **4.5 thousand tons month all year.**
