

COMPANY

Aware of agribusiness strength and feeling the need to add value to the grains produced on his property and contributing to the development of the region and local economy, the producer and agronomist Rubens Tonon idealized in recent years a project that resulted in the creation of BRMILL Alimentos, a São Miguel agricultural company, intended to process grains of maize for the food industries.

Established in the municipality of Silvânia-GO, the company benefits from the privileged logistics position in the center of the country that allows it to easily serve the national market, as well as have quick access to the main ports of the country.
