

COMPANY

The company was founded in 2021 after its founding partner Gustavo Abdalla hired an international consultancy to export honey, which proved to be the most viable considering the context of his international contacts for more than 20 years involved in foreign trade in various segments, even if he didn't work directly in some, and the desire to have a quality product that would unite people and have the possibility of harmonizing with other foods anywhere in the world.

By knowing that almost 100% of the honey exported from Brazil today is in barrels, which makes it possible to mix it at the destination, Duvera came up with a bold project to innovate.
