

COMPANY

The Zumbi Apiary had its origins in the União dos Palmares beekeepers' association more than 20 years ago. With a view to reaching new markets, the Ferreira brothers created Apiário Zumbi, a tribute to Zumbi dos Palmares, since the Serra da Barriga is in the company's town. With that, we sought the SIF seal, so that new markets could be reached. Currently, with a new structure, it can fill up to 4,000 kilos of honey a day.

We also work with other honey derivatives, such as propolis extracts, including red propolis, and honey compounds with various flavors. After reaching six northeastern states, they now believe they can take their products to the international market and with this they have great partners like the CNA.

PRODUCTS

NCM 0409.00.00

Apiário Zumbi dos Palmares values environmental preservation and associativism, and has all the registrations to market in Brazil and abroad. Each jar of honey comes from the work of the bees in the Atlantic Forest and the dedication of the beekeepers, guaranteeing quality, safety and authenticity. By choosing our products, you are supporting a history of respect for nature, strengthening local communities and enjoying a unique experience: tasting natural, healthy and sustainable food.

NCM: 0409.00.00 - Natural honey from Apis bees: Packaged in jars of various shapes, which can be adapted to international needs, a great differential is the production of honey with pieces of comb. All with a wild bloom.

NCM: 0410.90.00 - Green and red propolis extracts: Green propolis is already well known on the market and we can get a very competitive price on the market, while red propolis is unique, sought after by several countries for its differentials in relation to other propolis, with an exceptional concentration of isoflavone and flavonoids.

NCM 0409.00.00 - Honey compound with various flavors: In spray or jar. All products can also be worked with the customer's own brand.

Honey comes from the wildflowers of the northeastern Atlantic forest. And red propolis from Alagoas is unique in the world.

DETAILS ON PRODUCTION CAPACITY, SEASONALITY AND OTHER CHARACTERISTICS:

The production and packaging of honey reaches up to 4,000 kilos a day and propolis extracts can be produced in up to 100 bottles a day.
