## PRODUCTS

**NCM 0409.00.00**

Favored by the fact that it is located in a tropical country, Apidouro benefits from the production of honey from different flowering, which occur all year round and which stand out in the national and international market for being aromatic, tasty and totally free of antibiotics.

Among the products offered, orange tree honey, grape vine honey, Japanese grape honey, bracatinga honey (aphid), quince and eucalyptus honey stand out.

The strict control and continuous maintenance of the product standard preserve its unique characteristics highlighting its high class in all aspects relevant to evaluate a good honey: origin, purity, aroma, taste and color.

Apidouro works with strict internal production control. In this way, our beekeepers go through internal audit processes. So that the production respects all the rules imposed, ensuring traceability in the honey production.

### DETAILS ON PRODUCTION CAPACITY, SEASONALITY AND OTHER CHARACTERISTICS:

Apidouro has a production capacity of more than 1,000 tons per month. Respecting the seasonality regarding harvest between period (June and July) where honey production is scarce in Brazil.
