

BLACK PEPPER

COMPANY

DINAM is a business with a positive socio-environmental impact, which operates in the production chain of black pepper produced sustainably in the Brazilian Amazon, in the production and marketing of grains. It arose when we observed the lack of innovative and sustainable practices in production and the difficulty of producers in carrying out the disposal of grains.

DINAM encourages and replaces the traditional model of cultivation that uses a cut wood stake that increases the costs of implantation and production of peppers and has a negative impact on the forest, with an innovative and sustainable model, planting the peppers along with a tree called Gliricidia, thus having a sustainable production.
