

COFFEE

COMPANY

Our history begins in 1960, when 27 producers founded the Coopervass. At first, the focus was milk production. Producers have diversified to improve farm efficiency and profitability. Today, in addition to milk, our region is a major producer of cereals and, mainly, coffee that has been standing out for quality.

Our mission is to support and encourage our producers. We are looking for differentiated markets to bring more income and quality of life to our producers.

PRODUCTS

NCM 09.01.11.10

Our main product is natural coffee, but we also have other processes such as "semi-washed" peeled cherry and some types of fermentations. The terroir of the region is impressive, favorable climate, fertile soils, altitudes from 800 to 1520m, a diversity of varieties.

We have a large number of micro batches with diversities of flavors and profiles, in addition, we can offer some blends of the region or develop exclusive blends.

Our region has a huge potential for the production of special coffees, but our biggest differentials are the work of the producer and the stories behind each coffee. Each producer has their own unique way of producing. We want to show each of these stories of Serra da Mantiqueira. We recently obtained a Geographical Identification, the "Denomination of Origin", internationally recognized that gives greater credibility to our work. We offer quality, traceability with the face and history of each producer.

DETAILS ON PRODUCTION CAPACITY, SEASONALITY AND OTHER CHARACTERISTICS:

COOPERVASS annually receives about **150 thousand bags** between May and December. We can offer the coffees of the new harvest for shipment from July.
